PROJECTS

Online Electronic Store | *Java, Servlets, JDBC, Oracle, HTML5, CSS3, JSP, Apache Tomcat*

May 2025

- The Online Electronic Store is a full-stack web application designed to simplify the process of browsing, purchasing, and managing electronic products online. Developed using HTML, CSS, JSP, Java Servlets, and backed by an Oracle Database, the application runs on Apache Tomcat Server. It includes two major functional modules: Admin Module and Customer Module, each with specific roles and responsibilities to ensure seamless operations.

Travel and Tourism Management System | *Java, JDBC, Java framework, MySQL*

Oct 2024

- Developed a desktop-based application to manage travel-related operations including trip bookings, package management, and customer data handling. Designed a user-friendly GUI allowing customers to browse and book tour packages easily. Implemented admin features for managing destinations, tracking bookings, and updating customer records. Used JDBC for database connectivity and MySQL for backend data storage and operations.
